Vaughan's Famous Rainbow Garden of Gladioli

Eighty flowering size bulbs, ten each of the eight outstanding varieties illustrated on this page. Each variety separately bagged and labeled. Prepaid 600 miles for . . . **\$ 2.00**

Half Portion, 40 bulbs, 5 each of same 8 varieties, prepaid 600 miles for \$1.00.

The reproductions on this page are made, not of exceptional specimens, but of average flowers, reproduced on the same scale of reduction exactly one-fifth life size. For price and description of each variety see Gladiolus Pages.

IN every garden, including Victory gardens, gladioli should be grown. Most beautiful of summer flowers, they are at the same time the easiest to grow. As a border for the vegetable plot, or planted in a row beside the vegetables, they will thrive under the same cultivation and not only decorate the garden, but provide beautiful cut flowers for the home, or other purposes.

As the largest growers of gladioli in the world, we take pride in making this collection the outstanding value in the gladiolus field, in spite of the handicaps imposed by war conditions, which have seriously advanced costs and reduced production.

Each of the eight varieties is recognized by fanciers as among the finest in its color. With this collection, for a fraction of what a single

bulb of any one of these varieties would have cost a short time ago, you will have a gladiolus garden which few can equal.

The bulbs in this collection are not first size, but they are of flowering size, such as we use for growing exhibition flowers. They take a little longer to bloom than larger

bulbs, but the size and quality of flowers are equal to the products of larger bulbs, and the crop of bulbs for next year's planting is likely to be greater.

Vaughan's gladiolus farms are centered at Ovid, Mich., on Michigan Route 21, 13 miles west of Owosso. The farms begin to show flowers about July 15 and from then until October are a sight worth seeing. Visitors are welcome during the flowering season.

EVERBLOOMING HYBRID TEA ROSES

5 for \$4.25

ALL these Roses will bloom in your garden this summer, if planted according to simple directions furnished with the plants. Before winter comes they should have borne for you hundreds of lovely blossoms, beginning in June and continuing without interruption until killing frosts. Our plants are finest two year budded plants that are produced. The varieties are of the newest type, some of the very latest to make their debuts. Plant dormant Rose bushes as soon as the soil thaws and dries out enough to be prepared properly. As soon as dormant Roses are properly pruned and planted, hill them up with 3 or 4 inches of moist soil. This keeps the wind from drying the plants and helps them to leaf out more quickly. Remove the soil gradually as the plants begin to grow.

DO not let enthusiasm for Victory gardens cause you to neglect your lawn. National leaders urge that lawns and landscape beauty shall be maintained wherever possible without handicap to food production.

Without reseeding, fertilizing and good care, your lawn will suffer injury which will take both time and money to repair when peace returns.

Well advised lawn makers will avoid sowing the cheap mixtures which flood the market adulterated with quick show grasses such as timothy, a hay seed whose coarse stems ruin the lawn. Buy only seed on the quality of which you can depend.

The basis of VAUGHAN'S "CHICAGO PARKS" lawn seed is a large amount of the finest Kentucky blue grass, which is combined with other suitable grasses in the proper proportions to produce a fine permanent turf. Needless to say, it does not contain timothy, which is a hay grass and does not belong in a lawn; none of Vaughan's formulas include this unsuitable grass.

Price, 1/2 lb., 35c; 1 lb., 60c; 2 lbs., \$1.20; 3 lbs., \$1.75; 5 lbs., \$2.85; 10 lbs., \$5.50; 15 lbs., \$8.15; 20 lbs., \$10.75; 25 lbs., \$13.25; 100 lbs., \$49.00.

We offer this mixture without clover under the name "Vaughan's Fairway Formula"—Prices same as "Chicago Parks."

Vaughan's Special Purpose Mixtures

We recommend our lawn mixtures, composed of suitable varieties of grass seed, because results are more satisfactory from a correct combination of grasses than from a variety sown alone. Our grass seed division has long been known as an authority on growing fine turf, and for the guidance of our customers we send our booklet on lawn-making upon request and without charge. A copy of this booklet is enclosed in every carton and bag of Vaughan's lawn seed mixtures.

For Your Protection—Always remember that we neither buy nor sell seeds that are not tested in our own officially recognized laboratory for purity, germination, identity and freedom from weeds.

Vaughan's "Columbian"

Formula for Shady Lawns or Sandy Soil

In making a lawn on sandy soil or in partial shade, conditions are met which require the use of a special grass seed blend. Vaughan's "Columbian" is the correct blend for such locations.

Price, 1/2 lb., 40c; 1 lb., 65c; 2 lbs., \$1.30; 3 lbs., \$1.90; 5 lbs., \$3.10; 10 lbs., \$6.00; 15 lbs., \$8.90; 20 lbs., \$11.75; 25 lbs., \$14.50; 100 lbs., \$54.00.

Vaughan's Dense Shade Formula (Containing Creeping Red Fescue)

An exceptional formula which is particularly adapted to heavily shaded areas and will also do well in lighter shade. We have spared no care or expense to make this lawn seed the best obtainable for the purpose. Follow instructions in our lawn booklet for growing grass in the shade. Does not contain clover.

Price, 1/2 lb., 45c; 1 lb., 75c; 2 lbs., \$1.50; 3 lbs., \$2.20; 5 lbs., \$3.60; 10 lbs., \$7.00; 15 lbs., \$10.40; 20 lbs., \$13.75; 25 lbs., \$17.00; 100 lbs., \$64.00.

Quantity to Use—On new lawns, use 1 lb. for every 300 square feet; 5 lbs. for 1500 square feet; 135 to 150 lbs. for one acre. To replenish lawns where turf is thin, use half quantity.

VAUGHAN'S No. 25 LAWN FORMULA

An economy blend for new seedings and quick results which should be followed by reseeding with a more permanent blend like our "Chicago Parks." In spite of its low price, this blend does not contain timothy. Sow at the rate of 1 lb. to every 200 sq. ft. Begin cutting when grass is 3 to 4 inches high and continue to cut regularly to keep turf fine. Price, 1 lb., 40c; 2 lbs., 80c; 3 lbs., \$1.15; 5 lbs., \$1.85; 10 lbs., \$3.50; 15 lbs., \$5.10; 20 lbs., \$6.75; 25 lbs., \$8.25; 100 lbs., \$29.00.

Vaughan's "Private Estate" Bent Formula FOR LAWNS "DE LUXE"

For those interested in a de luxe mixture we highly recommend our Private Estate Formula—This formula contains over 98% pure seed and is free of all noxious weeds.

In addition to Kentucky Blue Grass of the highest quality, to insure a durable and resistant foundation for your lawn, Private Estate formula includes an important proportion of Certified Bent. It produces a heavy turf of very fine texture.

This mixture is equal or better in purity to the highest priced mixtures on the market and most important, contains more bent seed. It is the best value on the market.

Price, 1 lb., 70c; 2 lbs., \$1.40; 3 lbs., \$2.05; 5 lbs., \$3.35; 10 lbs., \$6.50; 15 lbs., \$9.65; 20 lbs., \$12.75; 25 lbs., \$15.75; 100 lbs., \$59.00.

Bent Lawns from Certified Seed

Ask for Our Bent Leaflet

Bent grasses are increasingly popular for lawns, especially in cities where lawns are small in area and extra care is not burdensome.

Seed at the rate of 3 to 4 lbs. per 1,000 sq. ft.

ASTORIA BENT. Astoria Bent is identified by its numerous root-stocks which spread underground and throw up new shoots, making a very thick turf, and by the presence of runners above ground in the early stages of development. This Bent has a good color and is excellent as both a lawn and putting green grass. It does not require as much cutting as Creeping Bent. We highly recommend this type.

SEASIDE BENT. This is a true unmixed Creeping Bent grass seed which spreads by surface runners instead of by the underground root stalks which characterize the Astoria Bent.

Newer Vegetables

It Has What Cauliflower Lacks

Broccoli, Italian Green Sprouting. 70 days. Though like cauliflower in flavor (many think it superior) this fine vegetable is unlike it in every way that makes cauliflower difficult in the home garden. It survives hot weather, bears a continuous harvest until frozen, and above all is one of the vegetables richest in the vitamins that cauliflower lacks. Pkt., 25c; $\frac{1}{2}$ oz., 45c; oz., 85c; $\frac{1}{4}$ lb., \$2.50.

Top Victory Garden Bean

Bush Bean Tendergreen. 52 days. For a long harvest of tender, brittle, stringless round pods, we recommend this among the many fine beans, for Victory Gardens. Pkt., 15c; $\frac{1}{2}$ lb., 30c; lb., 50c; 2 lbs., 90c; 3 lbs., \$1.25.

Hybrid Sweet Corn Our Choice. 68 days. One of the earliest hybrids, it is the sweetest we know, bearing 12-row ears for a heavy yield. Pkt., 15c; $\frac{1}{2}$ lb., 35c; lb., 65c; 2 lbs., \$1.20.

Hybrid Sweet Corn Lee. 73 days. A second early, bearing larger ears with deeper kernels, this variety is high in quality and completely resistant. Pkt., 15c; $\frac{1}{2}$ lb., 35c; lb., 65c; 2 lbs., \$1.20.

Hybrid Sweet Corn Golden Cross. 79 days. It has the quality of Golden Bantam and yields larger ears more abundantly; completely resistant. Pkt., 15c; $\frac{1}{2}$ lb., 35c; lb., 65c; 2 lbs., \$1.20.

Hybrid Sweet Corn Ioana. 83 days. It endures mid-summer and drouth, while maturing heavy crop of 12-14 row ears, $7\frac{1}{2}$ to 8 inches long. Pkt., 15c; $\frac{1}{2}$ lb., 35c; lb., 65c; 2 lbs., \$1.20.

Hybrid Sweet Corn Team. To produce a long harvest of heavy-yielding hybrid sweet corn in the Victory Garden, we recommend that the four varieties illustrated above, which vary in season from 68 to 83 days, be planted at the same time. Later varieties will give a longer harvest and heavier yield than earlier; and the four together will provide sweet corn all summer. 2 oz. of each variety in separate packets, totalling $\frac{1}{2}$ lb., 45c.

Finest Early Cucumber

Cucumber Mandarin. 45 days. There is aristocratic Chinese blood in this variety, which we consider the best, early or late, for Victory gardens. Its 12-inch fruits are slender, dark green, appetizing. Pkt., 10c; oz., 40c; $\frac{1}{4}$ lb., \$1.10; lb., \$3.20.

The Quality Carrot

Carrot Touchon. 70 days. From the time it is finger size and thinned out of the row in early spring, until it reaches full growth in the autumn, this variety excels in flavor, tenderness, even in yield, for home gardens. Its slender shape permits growing closer than thicker types, and decreases the core which all carrots have even though you may not see it. Its flesh is fine grained, sweet and has bright orange coloring. Pkt., 20c; $\frac{1}{2}$ oz., 45c; oz., 85c; $\frac{1}{4}$ lb., \$2.50.

HEAD OF BIBB LETTUCE

BIBB LETTUCE, CROSS SECTION

A Lettuce for Connoisseurs

Lettuce Bibb (Limestone). 57 days. This dark green, tender, brittle lettuce, which quickly makes loose heads as big as your fist, is becoming well known to chefs of luxury hotels and to high priced food shops. Some say it was once known as "Half-Century," others that it was bred by Maj. John Bibb, of Kentucky, born in 1789. It is making a comeback and we can promise you a fine spring crop, but must warn that it goes to seed quickly in hot weather. Pkt., 20c; $\frac{1}{2}$ oz., 30c; oz., 45c.

At Last, Hot Weather Head Lettuce

Lettuce Great Lakes. 75 days. Of the Iceberg type, bred to make tight heads in hot weather, this variety is actually too good. So reluctant is it to run to seed that almost no seed was produced to sell this year, when it won top place, with a bronze medal in the All-America trials for new varieties. What little seed there is naturally is high priced. Offered only in packets. Pkt., 40c.

Popular from Coast to Coast

Lettuce Oak Leaf. 40 days. The popularity of this tender, heat-resistant leaf lettuce has spread from coast to coast, and the Massachusetts Horticultural Society last year gave it an award of merit. For vitamins and Victory Gardens, it is our first choice. Pkt., 20c; $\frac{1}{2}$ oz., 35c; 1 oz., 60c.

Bright Orange Tomato

Tomato Orange King. 66 days. Because of sweet flavor, with a minimum of acidity, and solid flesh, with small seed cavities, yellow and orange tomatoes are growing in popularity. This is the smoothest, heaviest yielding and highest quality variety of the small vine type yet produced. Skin and flesh are a deep orange, giving proof of high Vitamin C content, making its juice an excellent substitute for orange juice in the diet. It is not suitable for pruning, and staking. Pkt., 15c; $\frac{1}{2}$ oz., 30c; oz., 50c.

Giant Spanish Onion

Onion Valencia Sweet Spanish. 110 days. Any well fertilized Victory garden can grow these huge, sweet Spanish onions. From seed, onions weighing a pound may be produced in the northern states; if started in the hot-bed, two-pound specimens can be grown. Our strain is selected for good results in the midwest. Pkt., 20c; $\frac{1}{2}$ oz., 65c; oz., \$1.20; $\frac{1}{4}$ lb., \$3.65.

Orange Colored Pepper

Pepper Oshkosh. 70 days. Color conscious hostesses attach importance to the color scheme of salads. This sweet pepper ripens to a vivid orange hue. The fruits measure 3 by 4 inches, are borne on upright bushes, and have top quality. Pkt., 15c; $\frac{1}{2}$ oz., 40c; oz., 75c.

New Type of Squash

Squash Butternut. 100 days. All the seed of this squash is contained in a small cavity at the lower end; so that ninety percent of its heavy fruit (12 inches long) is exceedingly sweet, firm, orange flesh. Pkt., 35c.

ALL AMERICA WINNERS

Cucumber Cubit. Awarded bronze medal in All-America trials for 1944. Dark green, cylindrical fruits with rounded ends, giving heavy early yield. Fruits are 6 to 8 inches, and quality good. Pkt., 25c.

Bean Keystonian Greenpod. Awarded Honorable Mention in 1944 All-America trials. A stringless, round-pod green bean which is compared with Tendergreen for quality, and said to yield more heavily. Pkt., 25c.

Basic War Garden \$1.

THIS collection provides the minimum planting of protective foods which should be made for a family of four. It includes the vegetables which combine highest nutritive values with ease of culture, except tomatoes, for which plants started early under protection may usually be obtained at planting time. Each of these vegetables **SHOULD BE GROWN AND EATEN** to maintain health, and all surplus should be preserved for winter **WHILE IT IS YOUNG, FRESH and DELICIOUS**. With each collection will be sent a suggested planting plan to give all-season yield.

All Double Petunias

Since the outbreak of war, no all-double petunia seed has been imported into the United States, and except for one variety none is produced here. The only seed available has been in stocks on hand which has rapidly decreased. Our own stocks were large, but we have reached the point where we are unable to offer named varieties, but we can supply our excellent Victorious mixture, in which all the colors of this well balanced strain, as illustrated, are included.

Seeds should be sown indoors early in the season, taking care to sow thinly enough to avoid crowding, so that every seedling can be raised.

Culture: A or B, Page 65

No. 1400 The forty or more varieties in this blend are chosen for their value as cut flowers. They are the long stemmed brightly colored flowers that go so well in vases and baskets. This will produce a glorious variety of flowers for cutting. We suggest planting in rows in the vegetable garden where the plants may be cultivated and the blossoms kept cut close so the production of flowers will be encouraged, as the more one cuts the more one has, the secret being not to allow any seed pods to form. ¼ lb., \$1.50; oz., 50c; ½ oz., 30c; pkt., 15c.

Send a packet of seed of their favorite flowers instead of a card to your gardening friends on their birthdays. Seeds will produce plants followed by flowers, which, long after the natal day is passed, will be a constant reminder of a friend. Cards are destroyed at once and soon forgotten. A packet of seed is secured for 10c—the better sorts for 25c and a few very select at 50c, same price as cards which are perishable. When you place your general seed order have this thought in mind and buy in anticipation of the birthdays to come. Nearly all of our packets are attractively colored.

A Fragrant Garden

Fragrance in gardens is a charming attribute we often talk about, but too seldom find. Just why this should be true is one of those mysteries of current fashion, which is hard to explain. We find the modern gardener in a frenzied effort to create the perfect color setting, and in his haste forgetting to include those sweet-scented subjects which give such a delightful perfume to summer evenings.

Some of this neglect may be due to the homely dress of some of the old-fashioned fragrant flowers. For example the even-scented stocks (*Matthiola bicornis*), which give such an abundance of perfume they may well be grown for that alone. But many fragrant flowers have been highly developed by modern plant breeding and may be planted for color and beauty as well.

Salvias

Culture: D or E, A or B, Page 65

The brilliant scarlet *Salvia Splendens*, so highly valued in summer beds, borders, window boxes and as cutflowers, is by no means the only worthy member of this family. The rich Wedgwood blue *Salvia Farinacea* Blue Bedder is increasingly popular in summer borders and the Indian Purple, a true violet purple, is most effective with *Centaurium Americana*.

Splendens Type

4640 **America, or Globe of Fire.** 16 in. Freest and most continuous bloomer; also the most uniform in habit, which makes it particularly valuable for bedding or ribbon planting. Pkt., 25c.

4646 **Blaze of Fire.** 12 in. Earliest of all. The compact plants are mounds of brilliant scarlet, starting to bloom when only a few inches tall and continuing in bloom until late fall. Pkt., 25c.

This brilliant family includes the biennials, as well as a number of true perennials, varying in height from dainty rock garden subjects 8 inches tall to the stately Pyramidalis and Persicifolia types which reach 6 feet. While large growing types demand rich soil, there are no flowers more thrifty or adaptable than the small and medium sized Campanulas.

Canterbury Bells

The Canterbury Bells are biennials, that is, from seed sown one year, the plants will bloom the following year, and the plant then dies. To keep up a yearly display they should be sown annually.

8015 HOLLYHOCKS Vaughan's Prize Double Mixture. Pkt., 10c. Plants, 3 for \$1.15.

Hollyhocks ①

Culture: B, D or E, Page 65

Hollyhocks are most decorative and the great spikes of bloom are "Towers of Beauty" to the garden picture. Following Delphiniums in the border show, have a long season of bloom which can be prolonged by picking off faded flowers, and a second crop will come if the first stalks are cut back. Need well drained location.

Hollyhock rust can be overcome by treating the plant as a biennial, sowing the seed early one year for flowering the next, as it is a well known fact rust seldom attacks young plants.

It is fascinating to grow your own perennials from seed. We recommend sowing perennial seeds in spring. Seed germinates better in the cool weather than in the heat of midsummer, and the long growing season produces larger plants that winter over more successfully. The majority of these perennials bloom the second year from seed, although some, like Coreopsis and Gaillardia, if sown early, bloom the first year. Plants can be raised in beds and transplanted, or the seed may be planted directly in your perennial garden. The great charm of perennials lies in their permanence; once established they are a constant source of pleasure.

FLOWER SEED CULTURES—HOW TO SOW

IN FIVE paragraphs below, designated A, B, C, D and E, we cover in considerable detail the methods of starting flower seeds which are available to the amateur without a greenhouse, and which cover well the needs of an outdoor garden. In the flower seed section in the case of each flower listed, information is given as to the cultural methods which can be used for that subject.

A Sow in the bed, border or row where the plants are to grow. The soil should be loamy, with well pulverized surface. With heavy soil inclined to cake and crack, it is usually best to grow plants in a seed bed (B) and transplant to the permanent place. Loosen the soil where seeds are to be sown, with the trowel, or hoe, several inches deep. Rake smooth. Broadcast small seeds and cover them lightly four or five times their diameter. Very small seeds may be merely pressed in. Larger seeds may be planted singly, well covered, but more thickly than plants are wanted. Firm the soil well over the seed. Watering now becomes of great importance. At no time should the soil be allowed to become hard and dry, yet excessive watering may cause the seeds to rot, sour the soil, or cause "damping off." When the plants appear, thin them out, allowing each to grow singly, without crowding. The distance between them is governed by their ultimate size and spread. Excess plants may usually be moved to a new location.

B Sow in outdoor seed bed, to be transplanted. The seed bed in the open should be of loose, mellow loam, raised slightly above the surrounding surface, and preferably surrounded by a wooden curb, to prevent rain washing across it. It should not be wider than four feet, so it can be worked easily. Shelter from high winds is valuable, but damp and shady corners are not desirable. Full sun is advisable when seedlings are up, while shade when needed, as in mid-summer for perennial seedlings, is best supplied by a lath or cloth canopy, which can be removed in damp and cloudy weather. Sow the seeds in rows which may be as close as five inches. Sowing and watering are the same as described in "A" above. Seedlings may be transplanted when they make true leaves, the second pair of leaves to appear; or they may be left until larger before being moved to their permanent location. Perennials should be moved from the seed bed to a nursery row, to grow until fall before being moved to the border.

C Sow in flat, pot or pan outdoors or in a cold frame. This method is applicable to slow germinating subjects, some of which may take a year to germinate. Fill the receptacle with potting soil as described in "D," firm the soil and broadcast the seed, covering four or five times their diameter. Place the receptacle in a shaded location, where there is free air circulation. During the spring, summer and fall, water often enough to prevent soil from drying out.

THE FARM PRIMER. Here is a practical manual, handbook, and reference book for the beginner and part-time farmer. The Farm Primer is exactly

While our cultural instructions are definite, detailed and exceptionally thorough, they should be supplemented by reading in good gardening books and by obtaining, at first hand, advice from successful gardeners in your neighborhood. Success in gardening requires study, and the opportunity for enlarging one's information and trying out new things is one of the most fascinating features of gardening.

A mulch of peat moss will help retain moisture. In winter, place in a protected place outdoors and cover with leaves. Have patience with slow germinating subjects; do not disturb too quickly. Any live seed will eventually grow if given time enough, provided soil, moisture supply, etc., are right. When seedlings appear and make true leaves, transplant to pots, nursery row or permanent location. If moss forms on soil surface, sprinkle fresh earth over top.

D Sow indoors in a box, pot or pan. This method may be followed where there is a window facing south, enjoying sunlight most of the day. Use a standard florists' pot or pan (shallow pot) or a "flat", which is a shallow box, with holes bored in the bottom for drainage. Cover the drainage holes in pot or box with broken pottery; fill with potting soil. This is a mixture of half sand and half black loam. It may be obtained from florists. Firm the soil, and sow the seeds in rows, marking each row to identify the sowing. Water by setting the box or pot in water, so that it soaks up from below, or use a fine spray which does not wash the soil. Place in a dark place, covered with a wet newspaper blanket until the seeds sprout. As soon as sprouts appear bring into full light. Cover the box or pot with glass to check evaporation, but when moisture collects on glass wipe it off, and prop up one end of the glass to allow air to circulate during the sunny part of the day. A temperature not below 50 degrees at night, or 75 degrees by day, is best. Do not allow the soil to dry out. When the seedlings have made true leaves (the second set), they should be transplanted to other flats, giving at least two inches of space apart; or they may be moved to small pots or to an outdoor seed bed or border.

E Sow in a hot bed or cold frame. A cold frame or a hot bed heated by manure or other means may be used. The best method with flower seeds is to sow seeds in flats, which are placed in the frame. With manure heated beds, seeds should not be sown until the temperature of the newly made bed has dropped to 90 degrees. Watering and ventilation are important. On sunny spring days, always prop up one end of the sash to prevent overheating, which may occur quickly and cause spindly growth. Do not allow the soil to dry out. When the seedlings have made true leaves, they should be transplanted to other flats, spaced two inches apart each way; or to the soil in the hot-bed, or to an outdoor location, if late enough.

Plan to Produce Without Waste

Grow the vegetables your family will eat and put up for winter, and no more. Below shows the space in a garden row which should produce one serving for a family of four. Serve three vegetables dishes a day (exclusive of potatoes) for maximum nutrition, two for dinner (one a raw salad) and one for lunch. Estimate the number of times each week you would like each vegetable to appear on your table, then lay-out your planting to produce all needs next summer and winter.

The figures which follow are based upon the assumption that your garden is well fed, with at least the equivalent of 4 pounds of Vaughan's Lawn and Garden Fertilizer, or Balanced Plant Ration, for each 100 square feet. In poor, or unfertilized soil, more room will be needed.

Plan for All Season Harvest

Many vegetables have a short harvest period. Your sowings of these must be divided into two, three or more plantings, to spread the harvest throughout the season.

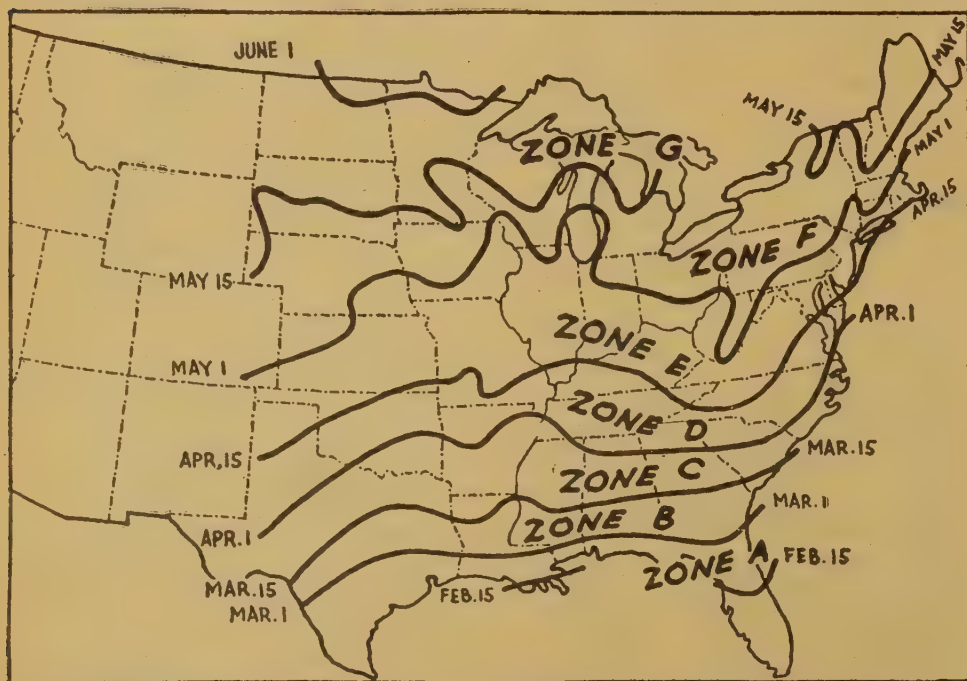

Below we give the approximate time that one sowing will remain in top condition after harvest begins. Plan your second sowing so that when this period is ended, a succession crop will be ready for your table.

In spring your second sowing, made in warmer weather, will probably mature quicker than your first; so space your sowings a little longer apart than the harvest period.

But summer sowings will mature more slowly as a rule, so third and fourth plantings should be closer together to allow more time to mature.

First sowings of beans, carrots and beets will bear all summer (provided the beans are kept picked clean) but young plants of these usually give best results, so division into several plantings is recommended.

Check Frost-Proof Date in Your Locality

This map shows the average date of the last killing frost in each zone. The latest recorded killing frost will be about thirty days later than the average. From this data, and from neighborhood experience, you can figure the probable frost-proof date in your locality.

BEANS

Artichokes

Jerusalem Artichoke Roots. About five bushels plant an acre, enough to keep 20 to 30 hogs from Oct. to April. Cut and plant like potatoes. In Europe the tubers are baked, like potatoes, and esteemed as food because of their distinctive flavor. Tubers can be supplied in March and April. Lb., 25c; 3 lbs., 50c; 10 lbs., \$1.25. Write for quantity prices.

Asparagus

ASPARAGUS from the home garden is one of the most delicious and earliest of crops. It may be grown in any deep, rich soil, either from seed or roots.

SEED PLANTING — Asparagus may be raised from seed and a crop obtained in three years. One ounce of seed will produce 300 plants.

ROOT PLANTING — A year may be saved by buying the plants and setting them two feet apart in the row, and the rows four feet apart.

WASHINGTON RUST-RESISTANT STRAIN. Developed by the experts of the United States Department of Agriculture, who originated this strain. Rust-proof plants are preferred by commercial growers. The most satisfactory strain is **MARY WASHINGTON**.

Mary Washington. Pkt., 10c; oz., 20c; ¼ lb., 50c.

Paradise. This is comparatively a new introduction and is claimed to be superior to the Washington strains in the following points: yields heavier, produces a crop one year earlier and has a very mild delicious flavor. It is claimed to produce as much as five tons of cut Asparagus in one season. Pkt., 15c; ½ oz., 25c; oz., 40c.

If by mail, add postage as follows. 100, 50c.

One week before frost proof date sow bush beans 2 inches deep, 2-4 inches apart, pole beans 4-6 inches apart. Harvest pods before seeds form. If picked clean, plants will bear until frost; but young plants yield best and succession plantings are advised.

TENDERGREEN BEANS. Pkt. 10c; ½ lb. 30c; 1 lb. 50c; 2 lbs. 90c; 3 lbs. \$1.25.

BEETS

Eat Roots and Young Tops

QUANTITY in Beets is measured by an even, globular shape, uniformity in size, bright, even color, flavor, fine texture and tenderness. Here, as with all vegetables, the difference between a fine and a mediocre strain of one variety may be as great as between different varieties.

Our best seed is grown only from transplanted roots, which are taken up in the fall, carefully graded, stored over the winter and transplanted again in the spring. Only Beets which conform to the highest quality standards are planted for seed. Thus improvement is shown annually.

While this extra care increases the cost of the seed, the increase is small compared with the added value which improved quality gives to the crop.

Quantity needed to sow: 15 ft. row, 1 pkt.; 60 ft. row, 1 oz.; acre, 7 lbs. (Rows 18 in. apart).

★**Perfected Detroit.** Matures in about 55 days. In this improved strain of Detroit Dark Red Turnip Beet the fine qualities which have made that variety standard for main crop sowing have been strengthened by careful breeding. It is earlier, and almost spherical in shape. Its small tops are just right for either dry or wet season, heavy or light soil. BROCCOLI

BROCCOLI ITALIAN GREEN
SPROUTING.

GREEN sprouting broccoli has been given new importance by the disclosure that because of its green coloring it is far richer in vitamins than white cauliflower, which it resembles in flavor. It takes rank as one of the protective foods, which defense authorities urge shall be given precedence in Victory Gardens. It is also a much easier subject for the amateur than cauliflower, and has a much longer season of harvest.

The type which has won greatest popularity produces a terminal head which may be cut, whereupon other heads are produced on lateral

branches, which in turn may be harvested. Typical center heads are shown in the illustration. It survives light frosts, and produces well in the cool autumn weather.

VAUGHAN'S SELECT SNOWBALL. Pkt., 35c; ¼ oz., \$1.00; ½ oz., \$1.75.

Pedigreed Cauliflower

BEFORE war completely shut off communication with Denmark, where our finest strains of cauliflower were grown, we were able to import highly selected stock seeds with which to start production of the same strains in this country. Tests have shown the excellent quality of the Danish strains to be maintained in crops grown from the American seed, which is produced under climatic conditions similar to those of Denmark.

Home gardeners will find cauliflower not difficult where conditions are right. When plants are set out in June or early July to mature in October, there is seldom any question of getting fine, large heads.

Quantity needed for 150 plants, 1 pkt.; for 1,500 to 2,000 plants, 1 oz.

★**Vaughan's Select Snowball.** Matures in about 55 days. Improved strain of our New Snowball, early, dwarf, compact, producing solid white heads which measure 9 to 10 inches across and have a perfectly white core. Chinese or Celery Cabbage

★**Celery Cabbage Pe Tsai.** The VAUGHAN Strain. This exceptionally fine vegetable is rapidly growing in public favor. Pkt., 15c; ½ oz., 35c; oz., 65c; ¼ lb., \$2.00.

Resistant Strains Thrive in Hot Summers

WHEREVER the temperature of the soil rises to 90 degrees or higher, there is danger of the yellows disease, and when it strikes, a crop failure may result.

In the great cabbage growing district centering around Racine and Kenosha, Wisconsin, an industry has been saved by developing strains of cabbage resistant to yellows. We offer seed of these strains, which have been developed by years of scientific work, and actual growing tests. The uniformity and yield of resistant strains have greatly improved. We recommend their use wherever danger of yellows may exist. If the disease strikes, resistant strains will show slight loss, where non-resistant types would probably be destroyed.

Regular Stock of Yellows Disease-Resistant Varieties

This is the first of our resistant strains to mature and is recommended to the home gardener where a cabbage for summer salad use is desired. Pkt., 15c; ½ oz., 40c; oz., 75c; ¼ lb., \$2.35.

SWEET CORN

to variety's height, thinning to three plants per hill. Time succession sowings, two weeks apart.

HYBRID SWEET CORN IOANA

Hybrids for Heavy Yield

HYBRID sweet corn excels in three ways: Heavier yield, more even maturity, and resistance to Stewart's disease, and other troubles. In flavor, which many home gardeners consider the supreme point, the variety Our Choice is equal to Golden Bantam, some think better. Other hybrids will compare well in flavor with other open pollinated.

Any open pollinated corn will mature unevenly and give edible ears from one planting over a longer period, which some may prefer. Our list has been revised to offer the best of both hybrid and open pollinated types, as proved by exhaustive tests in our trials.

A packet plants 40 hills; a pound 400 hills; 12 pounds an acre.

HYBRID RESISTANT

★**Lee.** Pkt., 15c; ½ lb., 35c; lb., 65c; 2 lbs., \$1.20. See Novelty Page 6 for Description.

Golden Pride. 68 days. From Connecticut Experiment Station. Compared with Our Choice, it is longer by one inch, supplies more cut corn, is fully as fine a kernel and has as good or better quality. We recommend it. Pkt., 15c; ½ lb., 35c; lb., 65c; 2 lbs., \$1.20.

★**Golden Treasure.** 66 days. Two weeks earlier than Golden Bantam and about five days earlier than Golden 60-Day. Of 120 different strains in our trials, this was the earliest of all. It has a larger ear than Golden Bantam, 12 rows of kernels of good, sweet flavor, producing 35% more shaved corn to the ear. Pkt., 15c; ½ lb., 35c; lb., 65c; 2 lbs., \$1.20.

★**Our Choice.** 68 days. Maturing two days later than Golden Treasure, this is the sweetest variety we know, not excluding Golden Bantam. It is heavy yielding, with a good size 12 row ear, and completely resistant. For the home garden this would be our choice for an early. Pkt., 15c; ½ lb., 35c; lb., 65c; 2 lbs., \$1.20.

★**Surprise.** 64 days. 10 to 12 rows, golden yellow, ears 5 ½ to 6 inches. Stalks 57 to 60 inches tall and bear the ears 12 inches from the ground. We can recommend this for your first early corn of good flavor. Pkt., 15c; ½ lb., 35c; lb., 65c; 2 lbs., \$1.20.

Golden Nugget. 68 days. An excellent early, 66 inches tall, well filled ear 7 ¼ inches long, 8 to 12 rows of kernels. The size of the ear recommends it more than the flavor, which is medium. Pkt., 15c; ½ lb., 35c; lb., 65c; 2 lbs., \$1.20.

VITAMIN-RICH GREENS

Essential Foods for Good Nutrition

SPINACH KING OF DENMARK. Pkt., 10c.

Spinach

SPINACH delights in cool, moist weather. Seed should be sown at the earliest possible moment in spring in rows one foot apart and thinned to six inches in the row. It matures in 45 to 50 days and quickly runs to seed in warm weather. The Antvorsk variety, listed below, is most free from this tendency. Home gardeners have generally adopted Swiss Chard and New Zealand Spinach as a greens crop, as both may be cut many times and will produce a continuous crop until freezing weather in the fall. A fall crop of spinach may be sown in late July or August and will find the cool, moist autumn weather favorable for growth. The value of spinach in the diet has been scientifically established by the vitamin investigation.

★**Viking.** 45 days. This 1935 All-America winner bears largest leaves of the thick-leaved type, and is almost as long standing as King of Denmark. Its leaves are smooth to slightly crumpled, dark green, and of excellent quality for home and market. Pkt., 10c; oz., 20c; ¼ lb., 50c.

King of Denmark (Antvorsk). 48 days. In our trials this variety has been slower to run to seed than any other sort. Antvorsk forms quite large tufts (or rosettes), compact and low. The numerous leaves are extra large, broad and rounded, exceedingly bushy, slightly crumpled and of a glossy dark green color. Pkt., 10c; oz., 25c; ¼ lb., 65c.

Bloomsdale Long Standing. 45 days. Latest of the Long Standing Spinach introductions. Improvement was accomplished through the selection of hermaphrodite plants (bisexual), which run to seed much more slowly than the unisexual. This variety is of better quality than the Antvorsk (King of Denmark), having larger, Savoy type leaves. Pkt., 10c; oz., 25c; ¼ lb., 65c.

★**Nobel Giant Thick Leaved.** 45 days. The seed of this thick-leaved variety produces the largest spinach under cultivation. It grows rapidly and remains in good condition a long time. The medium-green leaves are large, rounded, slightly crumpled, succulent and tender. It is an excellent home garden spinach. Pkt., 10c; oz., 20c; ¼ lb., 50c.

Bloomsdale Dark Green. 43 days. The leaf is savoyed, or crinkled, and of a darker green than Bloomsdale Long Standing. The dark color is preferred in some markets. Pkt., 10c; oz., 20c; ¼ lb., 50c.

Princess Juliana. In 50 days. This is a new type of "Long Season" Spinach. The leaves are of good size, very dark green, well crumpled and thick. The first plants of Spinach to bolt to seed are the male plants. (Spinach is generally dioecious; i. e., there are male and female plants.) This first bolting seed has been eliminated in this new race by the production of hermaphrodite plants, these plants seeding much later than male plants. Pkt., 10c; oz., 25c; ¼ lb., 65c.

Old Dominion. 40 days. The same as Virginia-Blight-Resistant in type and quality. Will eventually take the place of Virginia because of its long standing qualities, which permit early fall planting. Pkt., 10c; oz., 20c; ¼ lb., 50c.

Vaughan's Special. In 43 days. An early, smooth leaved spinach, being more upright in growth than other spinaches and nearly a long standing variety. Pkt., 10c; oz., 25c; ¼ lb., 65c.

Bloomsdale or Norfolk Savoy-Leaved. About 40 days. Is a very hardy sort; the leaves are very thick and blistered, making it a fine shipper; it is a good standard size. Pkt., 10c; oz., 20c; ¼ lb., 50c.

NEW ZEALAND SPINACH

★**New Zealand Spinach.** *Tetragonia Expansa.* 60 days. LETTUCE

TASTY bowl salads not only delight the palate, but when made with green leaves, are rich in Vitamin A and other dietary necessities. Home gardeners may plan their sowings so as to have bowl salad materials throughout the season. Besides lettuce, endive of both curly and broad-leaved types (Escarolle) are excellent, as are cress and Fennocchio. Heading varieties of lettuce may not head readily in hot weather sections, but they grow rapidly and produce an abundance of leaves. Says Emile Foially, salad chef of the Hotel Sherman's famous College Inn, Chicago: "Leaf lettuce and romaine are far more tender and better flavored; and take the salad dressing perfectly, which is important. And the doctors say their green leaves have more vitamins. What a combination!" Quick growth is essential for all leaf crops. Quantity needed to sow: 30 ft., 1 pkt.; 250 ft., 1 oz.

Grow Your Own Mushrooms

TO GROW a crop of Mushrooms in your own basement cellar or well-built outbuilding—is a home gardening effort worth making. While these are quickly salable, we are sure most of our readers would insist on eating their own crops! The location of the beds must be one where a temperature of 55 degrees to 65 degrees can be kept during cold weather. A barrel may be used in which to confine the manure for growing. A leaflet, "How to Grow Mushrooms," FREE with orders for Mushroom Spawn.

VAUGHAN'S BOTTOM ONION SETS

The first home garden harvest in the spring is young onions from sets. Spring sets can be put into the ground as soon as it is able to be worked and in a few weeks the delicious young onions are ready to serve on the table. Plantings may be successively late into the summer, as long as the sets remain in good condition.

Quantity needed for 75 to 100 ft., 1 lb.

White Bottoms. Our sets of these are very choice, small, dry and unspouted. Lb., 50c; 2 lbs., 95c; 5 lbs., \$1.90; 10 lbs., \$3.50.

White Sets being very scarce, when they are exhausted, we will substitute Yellow unless customer specifies otherwise.

Yellow Bottoms. Fine dry sets, medium in size and unspouted. Lb., 50c; 2 lbs., 95c; 5 lbs., \$1.90; 10 lbs., \$3.50.

Red Bottoms. Bright, deep red in color, even and dry. Lb., 50c; 2 lbs., 95c; 5 lbs., \$1.90; 10 lbs., \$3.50.

Golden Globe. Sets. Large yellow globe. Very desirable as a large dry onion for the home gardener. A superior keeper. (Lb., 50c; 2 lbs., 95c; 5 lbs., \$1.90; 10 lbs., \$3.50.

Use large sets planted 2 inches deep for green onions, smaller one inch deep for mature onions; space the first one-inch apart, the second 3 to 4 inches. Plant with the earliest crops.

Pound and two pound prices for Onion Sets shown on this page include Parcel Post prepayment through first three zones. For further zones add 5c per pound. Onion Sets if ordered before March 1st, are 5c less per lb.

The largest onions may be grown from sets ¾ to 1 ¼ inches in diameter.

FOR FALL PLANTING

Yellow Multipliers. Especially valuable for the first early spring onions. They are very mild and sweet in flavor and far superior to the green onions from other sets. There are usually several stalks from a single bulb and in this way are very productive. Their most important quality is their extreme earliness being ready for eating ahead of any other kind. Lb., 50c; 2 lbs., 95c; 5 lbs., \$1.90; 10 lbs., \$3.50.

Egyptian or Red Perennial. For fall planting only. This variety never forms a large bulb; its value lies wholly in its special adaptability to produce green onions for spring or fall use which are perfectly hardy and stay in the ground all the time. We sell in fall only, to be planted for early spring crop. Lb., 25c; 2 lbs., 45c; 5 lbs., \$1.00; 10 lbs., \$1.75.

BERMUDA ONION PLANTS

These are especially suitable for home gardens. Seed is sown early in Texas, and the plants are lifted, to be replanted in Northern gardens, to produce sweet, mature onions of Bermuda quality. Ready April 1st. Per bunch of approximately 100, 60c, postpaid. Ten bunches, approximately 1000, \$4.00, postage extra; weight about 6 lbs. per 1000.

Close Cousins of the Onion

Garlic Sets

Selected Bavarian. In about 110 days. Garlic is grown by planting the small bulbs in rows, 4 inches apart in the row. Cover the bulbs with one inch of soil. When the tops turn yellow, lift the bulbs and dry in the shade. To keep for the winter, hang in strings in a dry basement. Lb., 40c; 10 lbs., \$3.50. Postage extra. Write for latest market prices on quantities.

Chives

A perennial herb, a member of the onion family which every garden should grow. The slender, tubular leaves have a delicate onion flavor, just enough to season a green salad when the chopped-up leaves are used. The leaves are used for seasoning. The flowers are a beautiful lavender. Pkt., 25c; ½ oz., 90c; oz., \$1.75.

Leeks

Leeks are better if transplanted. Use a dibber, set the plant deep in the hole and do not fill it up but let the soil wash in. Leeks are cousins of the onions and their flavor is subtly different when used in stews. All varieties mature in about 130 days.

★**Elephant.** Largest of all leeks. Pkt., 15c; ½ oz., 50c; oz., 95c.

Large Musselburg. Enormous broad leaves, mild flavor. Good exhibition sort. Pkt., 15c; ½ oz., 50c; oz., 95c.

ONIONS

Sow with the earliest crops, in rich soil, in drills $\frac{1}{2}$ inch deep. Thin to 4 inches apart, using discards in green stage. Water when needed. Harvest after tops shrivel and dry in the sun, store in a dry place.

PLANT breeders select for parents, specimens which do well in their breeding grounds. If bred in Illinois, the progeny of these plants will be resistant to Illinois hazards, and will have a liking for similar soil and climate.

Breeding work in California necessarily develops strains that thrive under the unique California conditions but which might not thrive so well elsewhere. Because of this we breed all our onions in Illinois, so we can know that our strains are adapted to the conditions of soil and weather which prevail in the great area lying east of the Rocky Mountains to the Atlantic Ocean, where our seed is chiefly grown. Liking for this environment is bred into our onion strains.

Our strains are grown from mature onions which have been carefully inspected for conformation to type, and excel in productiveness and uniform quality. The small additional cost over ordinary seed is insignificant compared to the great improvement in your crop. Quantity needed to sow: 25 ft., 1 pkt.; 125 ft., 1 oz.; acre, 6 lbs.

Onions for Winter Keeping

★Golden Globe. 115 days.

An exceptionally fine yellow globe onion of superior weight. When grown as a dry onion its keeping quality is superior, making it very desirable for the home and market gardener. Has a very deep globe, carrying its greatest diameter well up from the root. Has 3 skins for protection and from seed matures same time as Southport Globe. From sets it matures much earlier. It is a heavy yielder and a fine keeper. Pkt., 15c; $\frac{1}{2}$ oz., 50c; oz., 95c; $\frac{1}{4}$ lb., \$2.80.

Golden Globe. Pkt., 15c.

★Southport Yellow Globe. Ball type. In about 110 days.

For growing on muck soil, this is the best keeping strain we have been able to develop in years of growing and selecting. This is the most uniform strain and will keep in storage longer than any other we know. It is preferred by large onion growers. Pkt., 15c; $\frac{1}{2}$ oz., 50c; oz., 90c; $\frac{1}{4}$ lb., \$2.60.

Southport Red Globe. About 110 days. A little deeper than Southport Yellow Globe, in color a rich dark red. A wonderful keeper with finely bred neck and a heavy yielder. Pkt., 15c; $\frac{1}{2}$ oz., 40c; oz., 75c; $\frac{1}{4}$ lb., \$2.35.

100
★**Vaughan's Special Yellow Globe.** days. ("MOUNTAIN" DANVERS.) Slightly smaller than Southport. When aphid damages the late onion crop it does not harm this variety, due to early maturity. Pkt., 15c; $\frac{1}{2}$ oz., 50c; oz., 90c; $\frac{1}{4}$ lb., \$2.60.

Large Red Wethersfield. About 100 days. An onion of very productive habit and a fine keeper. The skin is deep purplish red, which covers a round, somewhat flattened bulb of purplish white flesh. Moderately fine grain and mild flavor. In poor soil it does best, growing a thinner neck than in strong soil. It is standard in its class in the south and southwest. Pkt., 15c; $\frac{1}{2}$ oz., 40c; oz., 75c; $\frac{1}{4}$ lb., \$2.30.

Fancy Yellow Globe Danvers. About 110 days. This is early, almost true globe-shaped, beautiful yellow skin, pure white flesh, of very fine quality. It has a good size, and a fine thin neck. Vaughan's strain is so near to globe shape that it passes for globe on the market. The crop ripens uniformly at one time, and its keeping quality is excellent. Pkt., 20c; $\frac{1}{2}$ oz., 50c; oz., 95c; $\frac{1}{4}$ lb., \$2.80.

Brigham Yellow Globe Onion. 110 days.

A strain of Southport Yellow Globe. While not as uniform in shape, it is among the best in production and keeping qualities. It may be grown successfully on either muck or heavy soil. Pkt., 15c; $\frac{1}{2}$ oz., 50c; oz., 90c; $\frac{1}{4}$ lb., \$2.60.

Ohio Yellow Globe. In 110 days. Of uniform shape, beautiful color and fine size, it out-classes the old type Yellow Globe Danvers. Its finely bred neck, large size, solid flesh of mild sweet quality, uniform growth, heavy yielding and superb keeping quality have made it a favorite. Pkt., 15c; $\frac{1}{2}$ oz., 50c; oz., 95c; $\frac{1}{4}$ lb., \$2.80.

Vaughan's Ideal White Globe. About 110 days. A strikingly handsome onion; very early, ripens evenly and is a fine keeper; the small, high-bred neck tells the story of quality; it is a true globe, pure white. Pkt., 20c; $\frac{1}{2}$ oz., 70c; oz., \$1.30; $\frac{1}{4}$ lb., \$3.80.

SOUTHPORT YELLOW GLOBE. Pkt., 15c.

VALENCIA SWEET SPANISH FROM A MIDWESTERN GARDEN. Pkt., 20c.

Spanish Type Onions

★Valencia Sweet Spanish. about 110 days.

Here is a mild, sweet, giant onion of the true Spanish or Bermuda type, which you can grow from seed in your own garden. From seed it will produce onions weighing a pound; if started in the hot bed, two pound specimens can be grown. It takes two or three years for us to produce seed in Illinois, and the crop is always light, but the quality justifies the increased cost of seed. These onions are delicious at all stages of growth and will give you something to boast about. Pkt., 20c; $\frac{1}{2}$ oz., 65c; oz., \$1.20; $\frac{1}{4}$ lb., \$3.65.

Riverside Sweet Spanish. 110 days.

A California grown strain of the Spanish (Denia) onion. With us it grows larger than the American Prizetaker and does not produce the "stiff-necks" usual in the Spanish type. It is the most popular onion in Southern California and when grown as a specimen attains enormous size, 4 to 4 $\frac{1}{2}$ pounds. In color it has a cream or pale yellow tint. Pkt., 15c; $\frac{1}{2}$ oz., 55c; oz., \$1.00; $\frac{1}{4}$ lb., \$3.20.

Prizetaker—American Grown.

105 days. Among large onions this one is exceptional for size and beauty; it is of the same type as the large Spanish onions, imported and sold for high prices. Vaughan's American-grown seed has become thoroughly acclimated through many years of very careful, painstaking culture. Prizetaker is a yellow globe that matures to great size under right conditions; it requires a long season and should be started early in hotbed. When properly ripened it is a good keeper. Pkt., 15c; $\frac{1}{2}$ oz., 45c; oz., 85c; $\frac{1}{4}$ lb., \$2.70.

Bermuda Type

Crystal White Wax. In about 90 days. This is a pure white flat onion, very popular in the south, especially in Texas. Will make but small onions in the north. Very sweet. Tenderifed seed. Pkt., 15c; $\frac{1}{2}$ oz., 35c; oz., 65c; $\frac{1}{4}$ lb., \$2.00.

Bermuda Onion Plants started in Texas and sent North to grow on in your garden will give you backyard Bermudas with little trouble. See Page 80.

Onion Seed of Flat and Pickling Types

Quantity needed for 25 ft., 1 pkt.; 125 ft., 1 oz.

White Portugal or Silverskin. About 100 days.

This beautiful white onion is a splendid sort for growing white onion sets, pickles and for early bunching green onions. Vaughan's White Portugal or Silverskin is a medium size bulb, flat shape. It has fine mild flavor, and is best of the white onions for keeping. Pkt., 15c; $\frac{1}{2}$ oz., 65c; oz., \$1.25; $\frac{1}{4}$ lb., \$3.60.

Brown Australian (Flat). About 100 days. A very desirable onion of medium size, with amber brown skin and solid white flesh. It is early, a heavy yielder and a long keeper; keeps well in warm climates. Pkt., 15c; $\frac{1}{2}$ oz., 40c; oz., 75c; $\frac{1}{4}$ lb., \$2.15.

Ebenezer. In 100 days. There has been a tremendous demand for this yellow skinned onion for the growing of Onion Sets. Ebenezer Onion Sets produce a much larger tonnage of marketable onions than does the old Strasburg or Danvers. Moreover, a smaller percent of the sets run to seed. Ebenezer is a fine keeper, mild and well flavored. Pkt., 15c; $\frac{1}{2}$ oz., 40c; oz., 75c; $\frac{1}{4}$ lb., \$2.15.

ITALIAN ONION SEED

Vaughan's Pickling. About 90 days. One of the best white onions for pickling; it is small, round, hard, crisp and tender, early and ripens uniformly. A very handsome sort with opaque white skin. Excellent for green onions. Pkt., 15c; $\frac{1}{2}$ oz., 65c; oz., \$1.25; $\frac{1}{4}$ lb., \$3.60.

PEAS

Sow smooth seeded with earliest crops, wrinkled peas two weeks before frost proof date. Sow 2 inches deep, two inches apart in row, or in twin rows, 6 inches apart, with support between. Crop must mature before hot weather.

Eat Your Own Peas Six Weeks for 25¢

EARLY GILBO. Pkt., 15c.

PEAS are rich in sugar, which begins to turn to starch when they are picked; thus home gardeners alone can enjoy this crop at its best.

Where hot dry summer weather cuts short the crop, the problem is to get the heavy yield, large size and sugar content of the late sorts into early yielding varieties which will bear a crop before the summer's drought arrives. Our strains are selected for these qualities. Quantity needed for 100 ft., 1 lb.

DWARF

★Little Marvel. 64 days. The most satisfactory pea in the average home garden. The big point in its favor is that it remains in prime picking condition a week longer than the older sorts. Very productive, hardy, luscious and sugary. Vines 18 inches, pod dark green, well filled. Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 95c; 5 lbs., \$2.00.

Giant Stride. 74 days. Pea blight is a wilt affecting peas when they are planted too often in the same ground. You will find the new Pea Giant Stride nearly 100% resistant, as well as of top quality and a heavy yielder. It makes a vine 16 to 18 inches tall, dark green, with pods longer than Laxton's Progress and better filled with peas of excellent flavor. Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 95c; 5 lbs., \$2.00.

★Early Gilbo. 72 days. A new pea from one of our oldest pea growers. Rogers Brothers have perfected what they consider one of their best market garden varieties and have named it after one of their oldest breeders. Vine 24-28 inches tall, very dark and heavy. Pod 4½-5 inches long by ½ to ¾ inches wide, of the Dwarf Alderman type. Season 69 days. Pkt., 15c; ½ lb., 30c; lb., 50c; 2 lbs., 95c; 3 lbs., \$2.00.

Nott's Excelsior. In 62 days. Almost as early as the round seeded varieties, but far superior to them in quality. Vines about 15 inches high, pods about 3 inches long, each containing 5 to 7 peas of good size, tender and delicious. Pkt., 10c; ½ lb., 25c; lb., 45c; 2 lbs., 80c; 5 lbs., \$1.40.

LAXTON'S PROGRESS. Pkt., 10c.

★Century of Progress. 74 days. This is a vigorous growing, heavy yielding variety which bears large, wrinkled peas of the very highest table quality in greater profusion than other varieties of equal quality. It grows 20 inches tall, with heavy foliage of a dark green, and dark green pods 4½ inches long. It is an excellent home garden variety. Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 95c; 5 lbs., \$2.00.

Laxton's Progress. 62 days. The earliest of the large-podded, large-fruited wrinkled peas. Of all the varieties producing peas of equal quality, this is the heaviest yielding. It bears long pods, averaging one more pea to the pod than Hundredfold. Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 95c; 5 lbs., \$2.00.

Hundredfold. About 62 days. This is another of Vaughan's Specials that has proved itself a winner for gardeners. It is extra early, has large pods like "Telephone," which are filled with the finest flavored peas. Hundredfold is in season a few days later than the first earlies. It excels in size, appearance and productiveness. Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 95c; 5 lbs., \$2.00.

Sutton's Excelsior Improved. In about 63 days. It is a very fine first early dwarf pea, regarded by some as the best of the wrinkled sorts. Very hardy; can be planted early; vines are 18 inches high, very prolific; pods are almost square at lower end, larger and broader than the usual dwarf pea, dark green color. Pkt., 10c; ½ lb., 25c; lb., 45c; 2 lbs., 80c; 5 lbs., \$1.40.

American Wonder. 61 days. Among the oldest of the home garden peas it is being superseded by Nott's Excelsior and Little Marvel. Pkt., 10c; ½ lb., 25c; lb., 45c; 2 lbs., 80c; 5 lbs., \$1.40.

Premium Gem. 64 days. An extra early old type garden pea that could well be replaced by Nott's Excelsior or Little Marvel, as they are superior. Pkt., 10c; ½ lb., 25c; lb., 45c; 2 lbs., 80c; 5 lbs., \$1.40.

Dwarf Telephone or Daisy. About 76 days. A mid-season maturing sort of merit; vines are dwarf and bear large, bright green pods, each containing 7 to 9 peas of finest quality. This is a splendid variety, of which we offer a high-class re-selected stock. Pkt., 10c; ½ lb., 25c; lb., 45c; 2 lbs., 80c; 5 lbs., \$1.40.

Dwarf Defiance or Stratagem. About 79 days. Pea growers cannot afford to overlook this splendid main crop success; it is without a superior, a grand second early. The vines are vigorous, the pods dark green and immense in size and fullness, like "Telephone." The handsome pods are filled with peas that are sweet and rich flavored. Pkt., 10c; ½ lb., 25c; lb., 45c; 2 lbs., 80c; 5 lbs., \$1.40.

THE FOOD GARDEN. By Lawrence and Edna Blair. 148 Pages, 40 full page drawings. \$2.00. The twenty double-page spreads of line drawings show various steps in cultivating each crop and the text gives full explanations of the drawings and further cultural directions.

Tall Peas

THE gardener who takes pride in his peas and whose space is unlimited will find the tall-growing sorts unequaled for length of season, heavy yielding and high quality. Support should be given and they should be planted with plenty of room. Liberal fertilizing will be well repaid.

★Vaughan's Improved Telephone. 74 days. Of the tall-growing varieties of late peas, "Vaughan's Improved Telephone" is regarded by experienced and successful growers as the best sort for general purposes. Uniformly large pods, 5 inches or more long, filled with 8 to 9 delicious peas. Grows 4 feet high; is a main crop variety, and a heavy yielder. Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 95c; 5 lbs., \$2.00.

Everbearing. About 74 days. For late summer and autumn; very prolific variety. Pod about 3 inches long, with large peas of good quality. Pkt., 10c; ½ lb., 25c; lb., 45c; 2 lbs., 80c; 5 lbs., \$1.40.

EDIBLE POD PEAS

(Cooked like String Beans)

Dwarf Gray Sugar. About 65 days. Vines 16 inches. Pkt., 10c; lb., 50c; 2 lbs., 95c.

MEDIUM HEIGHT

A HEAVIER yield without sacrificing quality is obtained from the varieties of peas which require some support. The varieties listed below grow to three feet high and should be given support of chicken wire or brush between companion rows. The smooth podded sorts may be sown first, and if not allowed to mature too much, will be found to be of good table quality.

World's Record or Improved Gradus.

60 days. Gradus is the greatest of the wrinkled peas; it is large, early, and in flavor equal to the best wrinkled kinds. It is tender and should be planted in the warmest spot in the garden. Vines 30 inches, pods 4 inches long, beautiful green color, with 7 to 10 or more rich, tender peas in each. Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 95c.

Thomas Laxton. About 62 days. This is a selection of Gradus. The season is identical, but the pods are square at the end and deeper green. Vines are 3 to 3½ feet high. A better yielder than Gradus. Pkt., 10c; ½ lb., 30c; lb., 50c; 2 lbs., 95c.

Alaska—Called Earliest of All. In about 57 days. Alaska and "Maud S." are in all but color the same; Alaska seed is bluish in color; it is standard for market and canning. Pkt., 10c; lb., 40c; 2 lbs., 70c; 5 lbs., \$1.25.

Pea Cultural Notes

Peas should be sown when the ground is ready to work, without delay. It is important to have rich soil, somewhat light, and to give plenty of water if a full crop is to be produced. It will pay to use a balanced commercial fertilizer in the row when the seeds are sown. Do not crowd the seed. It is better to sow in single rows, with two inches between the seeds, or in double rows, the rows six inches apart, and seeds two inches apart.

Two Pounds Prepaid

Catalogue prices of peas, beans and sweet corn include prepayment on lots up to and including 2 pounds. For postage charges on larger lots, see page 120.

For the Home Garden—Early Ohio and Irish Cobbler are the best early varieties, the former in the east and the latter in the west. One of the rural type is recommended for the late crop.

Warba Resistant. Warba is a new potato bred by the Minnesota Experiment Station, which is early, highly productive, resistant to mosaic disease, with upright compact vines. Tubers of excellent cooking quality and uniform size are round and blocky, of white flesh and pale skin with pink eyes, ten days earlier than Early Ohio. 30 lbs., \$1.85; 60 lbs., \$3.70; 90 lbs., \$5.55.

Irish Cobbler—Early Heavy Cropper. An early of medium size, and in light soil maturing almost as soon as the smaller cropping earlies. Its size, shape, good quality and appearance commend it. Our seed is grown in Red River Valley, Minnesota. 30 lbs., \$1.85; 60 lbs., \$3.70; 90 lbs., \$5.55.

Russet Rural. A mid-season late potato giving a heavy set of good sized potatoes, russet color outside, but inside a good clear white. Preferred in many sections to the Rural New Yorker. 30 lbs., \$1.85; 60 lbs., \$3.70; 90 lbs., \$5.55.

IRISH COBBLER.

VAUGHAN'S IMPROVED EARLY OHIO.

Vaughan's Improved Early Ohio (Red).

A week to 10 days earlier than other strains of the same variety. The reason for this is not only in the great care with which our seed is selected, grown and housed, but it is produced under conditions which are the most favorable in the Red River Valley of Minnesota, the natural home of high-class potato seed. 30 lbs., \$1.85; 60 lbs., \$3.70; 90 lbs., \$5.55.

Katahdin.

Originated in Maine by the U. S. Dept. of Agriculture, it takes its name from Mt. Katahdin. The government spent \$250,000 in producing this variety. It is a slightly oval white, very smooth, with shallow eyes. The vines are light green and vigorous. So far no trace of mosaic has been found on plants of Katahdin. It ripens about a week earlier than Rural New Yorker and has consistently out-yielded Rural New Yorker and Green Mountain, and grades out with a smaller percent of No. 2 grade and culls. The type is very uniform and in cooking and eating qualities it is unsurpassed. Katahdin does well on rich peat soils and on muck. 30 lbs., \$1.85; 60 lbs., \$3.70; 90 lbs., \$5.55.

RADISH

Sow with earliest crops, in 1/2-in. drill, 5 seeds to the in. Sow early types one week's supply at a time, at weekly intervals. Mix with parsnips, parsley and carrots, to mark the row. Harvest when large enough to eat. Summer and winter types have longer harvest.

RADISH, GIANT BUTTER. PKT., 10c; OZ., 20c.

RADISHES from April to December are possible for the home gardener who sows early, midseason, summer and winter types.

Our strains are grown with the greatest care, which involves considerably increased cost, but the additional cost is small compared with the great difference in your crop.

Quick growth is the secret of success. A rich, light soil is required. The globe and olive varieties grow faster than the long type, and turn pithy sooner. The long types grow more slowly and are slower to turn pithy, so they endure heat better. Winter radishes should be sown in June or later and allowed to develop in the cool, moist fall weather. Quantity needed for 15 to 20 ft., 1 pkt.; 75 ft., 1 oz.

Vaughan's New and Standard Gladioli

PEARL HARBOR

RANGER (Commando)

MARGUERITE

CORINNE VAUGHAN

Best of the New Introductions

King of Hearts (Salbach). Ex. (Picardy X Grand Opera.) Sold under protection of U. S. Patent No. 360. The individual florets consistently measure from 8 to 8½ inches in diameter. The flower stems are not thick, but are strong and wiry, adding to the grace of this fine new variety. The plants are tall, make a vigorous growth, with deep green foliage, and carry a flower spike 2½ feet long. The blooms are of heavy substance and are always perfectly placed. Six to 7 well spaced blooms open at one time with 10 to 11 unopened buds. Light coral red with light carmine red line in throat. The whole color effect is more on the salmon, but distinctly on the coral red tones. Each, 30c; doz., \$3.00.

Marguerite (Pommert). Ex. Makes a massive spike of deep watermelon pink, with cream throat. Tall spike with unusually long flower-head. Its exceptional lasting qualities make it a good cut flower. Each, 40c; doz., \$4.00.

Oregon State (Bones). Ex. Salmon-pink with cream throat. Remarkably good substance, standing in good condition two days longer than Picardy. Florets face one way, which makes it a good cut flower variety. Each, 20c; doz., \$2.00.

Pearl Harbor (Kenyon). Dec. A color of purest white, no markings, which make this variety of valuable commercial importance as a cut flower. Unusual lasting qualities, straight grower, vigorous and a rapid propagator. Tall spike carrying 20 to 22 buds, opening 10 to 12 lovely large florets of pure white at one time. Balance of spike showing buds the entire length of stalk. A prize winner at all shows. Each, 30c; 5 for \$2.25.

Ranger (Vaughan). Formerly Commando. One of the rarest of gladiolus colors is dark red. Few varieties of this color have been bred which meet all round requirements, including exhibition size and quality, vigor of growth in the field, and ease of propagation. Perhaps the best to this time has been the Pfizter creation, Commander Koehl, and our 1943 introduction Ranger is in every respect an improvement over this.

In color, Ranger is much the same deep red as Commander Koehl, possibly half a tone darker. Its florets are larger, more evenly arranged on the stalk, and face better. The even self-color continues in the throat, without markings. The stalk is among the tallest, and grows with exceptional vigor. All red gladioli are known as poor propagators, and more than one new red has looked fine when first introduced, only to deteriorate in a few years.

Ranger is one of the best propagators we have seen among the reds, and having it under observation for several years we are confident it will take a permanent place as leader in its color. Each, 50c; doz., \$5.00.

Sir Galahad (Salbach). Ex. Sold under protection of U. S. Patent No. 356. A study in contrast, for the purity of its soft creamy yellow is enhanced by its diamond shaped blotch of rich crimson in the deep cream colored throat. A pure and perfect flower, well named for Galahad, the perfect knight. Florets are large and wide open—long flower spike with at least 6 of the 18 flowers open at once. Blooms are perfectly placed, and are of heavy substance. Stems always straight. For a clean, soft flower that is at the same time bright, Sir Galahad is supreme. Each, 30c; doz., \$3.00.

Snow Princess (Pfizers) Ex. A very fine new white star of good size and form. Tall, with long flower spike and many open blooms that are always perfectly placed. Stems never crook. Snow Princess is one of the very best whites. Mid-season. Each, 25c; doz., \$2.50.

Vredenburg (Pfizer). Ex. A very vigorous new white that should be of great value, particularly because of its earliness, size of blooms, and placement of florets. Each, 20c; doz., \$1.75; per 100, \$12.00.

California (Salbach). Ex. Sold under protection of U. S. Patent No. 359. An immense deep geranium pink that is simply breath taking. Almost a self color, except for a slightly deeper pink blotch in throat. Blooms are well expanded, are of heavy substance and are slightly ruffled. Plants make vigorous growth and are tall with long flower spikes. As many as six to eight blooms open at one time. Each, 30c; doz., \$3.00.

Chamouny (Baerman). Ex. An outstanding decorative variety. Rich, light cerise rose with the faintest edging of light rose; perfectly placed florets on tall slender spike, eight or more open at same time. Each, 25c; doz., \$2.50.

Coral Glow (Ellis). Ex. A rather unusual shade of rich coral orange; will open six or more extra large blooms of perfect placement and heavy substance; a particularly strong growing variety. Each, 20c; doz., \$2.00.

Corinne Vaughan. (Vaughan). An orchid self, with the tallest spike and largest florets yet produced in this color. It is definitely earlier than Minuet, which in our opinion, it surpasses in size and beauty. It has exceptionally large florets, well placed and facing properly. Each, 35c; doz., \$3.50.

(★) This mark indicates the variety is of outstanding merit.

Awarded a Certificate of Merit for a new achievement in the Gladiolus World. Each, \$1.00; 3 for \$2.50.

Glen Lake (Vaughan). Ex. In effect it is a lavender self paler than Minuet, with markings negligible and only in the deep throat. Stem is tall and strong florets faced well and overlapping, six to eight open at once. It is earlier than Minuet, opens better, is a far better propagator. This is a fine, tall growing variety for the garden, but of exceptional value for cut flower arrangements, both for room decoration and for the costume. Each, 30c; doz., \$3.00.

Helen of Troy (Salbach). (Patented) Ex. A truly magnificent flower; in color a lively peach-toned apricot with soft carmine throat markings; seven or more giant sized blooms on strong stiff spikes. A real 'champion.' Each, 30c; doz., \$3.00.

THRIPS TREATMENT

Vaughan's bulb farms in Michigan and the mountains of Tennessee are free from thrips. This insect pest is prevalent in many sections, however, and your planting may become infested from some neighboring focus. If thrips are known to be near you, prevention is advisable. Rotenone sprays and dusts are effective. (See page 106.)

The U. S. department of agriculture recommends, after plants have reached 6 inches in height, weekly spraying with the following formula: ¼ lb. Tartar emetic, 1 lb. brown sugar, 6 gallons of water.

We will ship Tartar Emetic, ceiling prices, postpaid for ¼ lb., 35c; ½ lb., 60c; 1 lb., \$1.00.

Resurrection Lily

(Amaryllis Hallii) (Lycoris Squamigera)
For Outdoor Planting

Produces in early spring attractive green foliage which grows until May, when it ripens off and disappears, and one not familiar with its habits would think the bulb had died, but about a month later, as if by magic, the flower stalks spring from the ground to a height of two or three feet, developing an umbel of large and beautiful lily-shaped flowers three to four inches across and from eight to twelve in number, of a delicate lilac-pink shaded with clear blue.

Culture—The bulb is perfectly hardy without any protection. The proper time to plant is in the summer when the bulb is dormant. Cover the crown about four inches. Each, 75c; doz., \$7.50.

Lycoris Radiata

A coral red Spider Lily. Bulbs planted 5 inches deep July 15th bloomed September 4th. This is not hardy, but has been known to survive freezing in pots. It sends up foliage in March. After the foliage dies down the bulb is dormant and sends its blossom up in August or September. Lily-shaped flowers of orange-red.

Each, 30c; doz., \$3.00; 100, \$20.00.

LYCORIS RADIATA

STERNBERGIA LUTEA

LILIUM SUPERBUM

LILIUM REGALE

LILIUM CANADENSE

LILIUM UMBELLATUM

Hardy Lilies for Spring Planting

HARDY lily bulbs, of 1943 crop, carried over the winter in cold storage, may be planted in the spring, and will blossom in mid-summer, when the garden needs their glory.

Lilies are truly among the most beautiful of all bulbous plants. They are especially suitable for planting in herbaceous borders, and enjoy a position where they are protected by the shade of surrounding plants. Light, well-drained soil is recommended. Bulbs should be planted 5 to 6 inches below the surface, and to prevent the accumulation of excessive moisture, surround the bulb with coarse sand and fill in with a mixture of fibrous loam and leaf-mold.

Many varieties are termed "stem-rooters"—that is, they develop roots on the stem up to two or three inches from the ground. These roots are voracious feeders, and on them depend greatly the number and size of flowers. When they appear, the plant should receive a top dressing of good rich soil on which they can feed freely.

For the smaller varieties, plant in clumps, the bulbs about 6 inches apart, leaving more space for the strong and larger species. The most striking mode of planting is in groups of 3 to 9 bulbs in a mass.

Lilium Canadense (Meadow Lily)

The whole plant has a downward, graceful movement and looks like a slender, tiered green belfry ringing golden bells. The flowers are nodding, bell-shaped, with petals flaring out and turning back slightly. They are heavily dotted on the inside with purplish brown dots. Blooms the end of June to July. Should be planted five inches deep. It is an excellent lily for naturalizing. Height, 3 to 5 ft.

Canadense Mixed—Each, 25c; dozen, \$2.50; 100, \$15.00.

Lilium Pardalinum

(Leopard or Panther Lily)—A late June flowering lily of rich scarlet and yellow, spotted rich brown from the Sierra Nevada Mountains of California. Ten to thirty flowers on a 5-6 foot stem.

Each, 35c; doz., \$3.50; 100, \$25.00.

Lilium Phillipinense Formosanum

A refined and graceful Lily with long grassy foliage, and long wide-mouthed trumpet flowers of the purest white, slightly marked externally with reddish brown. The plants grow to a height of 2-3 feet, are very robust and offer great resistance to wind and weather. It is hardy, very fragrant and one of the loveliest of the new varieties.

Each, 40c; doz., \$4.00; 100, \$30.00.

Lilium Regale

The large, trumpet-shaped flowers are snowy white, with a pure yellow center, while the exterior of the petals is slightly tinged pink. It is a strong grower, attaining the height of three or four feet. The flowers are beautiful, possessing a delightful fragrance. The bulb, which should be given good, sharp drainage (as should all lilies), is perfectly hardy, usually presenting a dried, shriveled appearance.

6-7 inch. Each, 40c; doz., \$4.00; 100, \$25.00.

Lilium Superbum

(American Turk's Cap, Swamp Lily)—The most magnificent and showy of the native North American species, well worthy of extensive culture. This splendid lily produces from ten to forty flowers of brilliant orange-scarlet, shaded yellow and spotted purplish brown at the base, with red anthers, in late July and August. This lily requires an acid condition and should be planted at least 8 inches deep. Height, 3-8 feet. Each, 30c; dozen, \$3.00; 100, \$20.00.

Lilium Tigrinum (Tiger Lily)

Plant this lily at least 500 feet from where you have other Lilies planted to prevent spreading mosaic disease.

Because it is so widely cultivated in this country this lily has come to be looked upon as native. The flowers are orange, spotted purple, opening in August and September on 2-4 foot stems.

Double. Each, 35c; doz., \$3.50; 100, \$25.00.

Lilium Testaceum (The Nankeen Lily, Excelsum, Isabellum)

A cross of the Madonna lily with the scarlet turks-cap, Chalcedonicum. It grows as high as six feet. There are three to ten flowers, three to four inches across. They are nodding, with reflexed, waxy, glistening petals, rounded at the tips, and of a creamy peach color popularly known as Nankeen yellow.

Each, \$2.25; doz., \$22.50.

Lilium Tenuifolium

The lovely Coral Lily of Siberia. A great beauty. The brightest of all lilies. Grows 20 inches high, with finely cut foliage, slender stems and beautifully shaded coral-red flowers. One ought to grow them by the dozen, they are so fine for cutting and making clumps for the lawn. Blooms very early. Each, 20c; dozen, \$2.00; 100, \$15.00.

Lilium Umbellatum (Subspecies of Davuricum)

This group of lilies is of hybrid origin, and thrives in American garden borders, multiplying and enduring. They are early flowering, blooming during the first part of June. Usually attaining the height of two to three feet, they carry four to six flowers of cup-shape.

Mixed. Each, 35c; doz., \$3.50; 100, \$25.00.

Dormant Roses, \$1.50; 3 of one kind for \$3.75

★**California.** AARS 1940. (Pat. 443.) "The Rose of Roses in shades of gold." Its unusual coloring, ruddy orange toned with saffron yellow, has a dual tone effect of indescribable richness and beauty. Buds long and pointed, flowers of enormous size, often five inches in diameter. Growth vigorous, with healthy, glossy green foliage. Very fragrant.

★**Grand Duchesse Charlotte.** AARS 1943. (Patent Applied For.) This rose is truly an Aristocrat which provides a new shade of red or claret never before seen in the rose world. The long streamlined buds of magnificent Morocco-red open to firm-petaled blooms of dusky coral-red which do not fade but gradually merge to a lovely coral-pink. When unfolding the petals recurve and make artistic informal blooms with a hint of carnation fragrance.

★**Heart's Desire.** (Patent 501.) AARS 1942. This is the No. 1 Rose of the 1942 "All-America Rose Selections," and what a Rose, for it really has everything that your heart could desire. It has color, a pure, even shade of luminous red which does not blue or burn, even in the hottest weather. It has fragrance, a small vase of flowers will sweetly perfume a whole room. It has rich foliage and produces quantities of flowers on long cutting stems all season. It has vigor, being a strong grower like Radiance and Crimson Glory, its parents.

★**Mary Margaret McBride.** (Patent 537.) AARS 1943. This deliciously fragrant rose is indeed a new triumph. Its long-pointed, salmon-pink buds gradually unfold, petal by petal, holding its radiant beauty at all stages. The full double blooms are large, high centered and a lovely coral-pink color fused with a shimmering gold at the base. It is excellent for cutting and is noted for its generous blooms, even in the hottest summers. Foliage is luxuriant.

★**Pearl Harbor—"The Memory Rose."**

This name was chosen to commemorate in some degree the deeds of our fellow Americans, many of whom gave their lives that we may live. It is a plant of tremendous vigor that will grow and bloom freely under most adverse conditions and there is scarcely a period during the season when magnificent buds and flowers are not available. The flowers are borne on vigorous canes and the bud is exceptionally long and pointed. The upper surface of the petals is a delicate shade of shell-pink, shaded golden-bronze at the base. The outer, or reverse side of the petals is vivid Tyrian-rose. Last, but not least, the plants of Pearl Harbor are practically thornless.

Vaughan's Wick-fed

WOOD SEED STARTER

View of Wick-fed Starter with Plant Bands.
Size, 12x18 inches, 4 inches high.

How wick is placed in bottom of starter.

End view showing water pan below.

COMPLETE, WITH FIBRE GLASS WICK, 60 PLANT BANDS, AND SPHAGNUM MOSS, \$2.50 FOR (Weight 4½ lbs.)

This seed starter must not be confused with the fragile, impractical pasteboard devices which have disappointed so many customers. This is a full size "flat," made of heavy wood to last for years, stained pale green, which you will be glad to have in your sun parlor or living room window.

It makes use of two of the most recent scientific developments in seed starting: 1. Wick-feeding of water, which keeps the soil at just the right moisture, never drying out, never too wet, and never dripping dirty water from an overflow. 2. The use of sphagnum moss to prevent damping off of seedlings, highly recommended by the U. S. D. A.

As shown in the illustrations, water is supplied to the soil from a pan placed underneath the starter, by the agency of capillary attraction, through a fibre glass wick, the top of which is frayed and embedded in the soil, the lower end being immersed in water in the pan below. Any suitable pan, saucer, or dish can be used.

Fill this container with water daily, and the wick will do the rest. This method of watering leaves nothing to chance or judgment, and solves in the easiest imaginable way one of the most serious problems of seed-box management. It has been thoroughly tested by Cornell University. The wick will last indefinitely.

Seeds may be sown in the starter in rows, broadcast or, as shown in the illustration, in plant bands. If started in plant bands, and grown one plant to a band, sturdy full size pot plants will be produced without transplanting. Seedlings may be easily transplanted into plant bands, if preferred. Start the seedlings in a small box, or get two seed starters, using one in which to start seeds, the other in which to transplant. Complete instructions for the management of the starter with detailed directions for a long list of subjects with each starter.

Three percent nitrogen; ten percent phosphoric acid; six percent potash.—This is a balanced fertilizer, chiefly composed of organic matter (bone, blood and potash), which has been used for 50 years with excellent results by florists, truck gardeners and amateurs, and which we recommend as balanced fertilizer for all around use in the home garden.

For lawns, use 20 to 40 lbs. per 1,000 square feet; and for cultivated gardens, 4 to 6 lbs. per 100 square feet. As liquid manure, use 1 part to 30 parts of water. Ceiling prices, 5 lbs., 50c; 10 lbs., 95c; 100 lbs., \$4.00.

Quality Perfumes

ALL AMERICAN

Even before France fell and while her finest perfumes were still available, we invited direct comparison with these, regardless of price.

Today, imported perfumes are no more. Vaughan's fine floral perfumes are still available, can still be compared with the finest, regardless of price.

While unusual demand has exhausted stocks of some odors, we have been fortunate in replacing most of these from small lots of fine essential oils imported before war destroyed contact with Europe's great producing centers.

If you can no longer find your favorite imported odor, you will find the following blends of the same individual character as the best Parisian bouquets: Bouquet S, Bouquet X, Hawaiian Lei, Zanzibar, Calcutta, Victoria Regina and Song of the Heart.

The Following Odors Are Available in Either Cologne or Perfume

Cologne is about one-eighth the strength of perfumes (about double the strength of ordinary toilet water). It is used wherever a perfumed lotion is wanted—in the bath, on linens, or as a refreshing lotion.

Appleblossom: Soft, yet fresh and clean.

Bouquet S: A delicately feminine blend rich floral oils that in France and America is accepted as the leading type of odor in the better shops.

Bouquet X: Another blend, slightly "drier" and less sweet. An exotic fragrance preferred by women accustomed to the better French perfumes.

Carnation: Many acknowledge it as the best recreation of this beloved old favorite.

Forest Breeze: A smoky, piney fragrance—the scent of a pine forest on an autumn day.

Freesia: We are proud to have captured the elusive scent of this delicate flower.

Gardenia: Not sweet like so many "Gardenia" perfumes—a rich, intense odor.

Geranium: Like a crushed leaf of the green plant.

Vaughan's Sampler: To prove to our customers the high quality of our perfumes, we have assembled a "Sampler" collection, featuring our ten leading fragrances, a full one-eighth dram of each, enough for several applications. All ten fragrances, \$1.00 plus 10c tax. \$1.10 postpaid.

Hawaiian Lei: A lovely blend of exotic tropical flowers.

Heather: A rich "smoky" or "peaty" fragrance that goes well with sport clothes.

Lavender: The well-known English type, not sweet or "musky" like so many near-lavenders.

Lilac: Lilacs wet with morning dew. Fresh and leafy—our largest selling odor.

Lily of the Valley: At last, a satisfactory reproduction of this elusive scent.

Magnolia: The veritable fragrance of the Southern Magnolia—rich and lush.

Red Rose: The Damask Rose type.

Sweet Pea: The true fragrance of the original Spencer sweet pea.

Violet: The English violet, softer than the Parma type.

Wild Rose: Like the breeze through a Sweet Briar hedge in June.

Zanzibar: Like a clipper ship laden with rare oriental woods and the spices of the Indies.

"Personalized Perfumes"

	Cost of	Perfume	Federal Tax	Total Price
Dram	\$ 1.50	\$0.15 \$ 1.65
Ounce	10.00	1.00 11.00

We take pleasure in offering this group of highly individual, specially blended odors, which while not exactly matching the perfume of particular flowers, do express the enchanting fragrance of gardens and woodlands.

Calcutta: The oil from which this perfume was made was intended originally for introduction at \$75.00 an ounce by a famous French house. Escaping the fall of Paris, the perfumer brought this oil to America as his only remaining asset. We contracted for the entire stock. This is perhaps the last great perfume that will come from Paris until Germany falls.

The fragrance is that of the rich, opulent bouquets for which the French are famous, yet it is so dry and woody that it is not cloying. Outstanding.

Victoria Regina: Based on the formula for the consecrated oil used in anointing Queen Victoria at her coronation. Rich and fragrant. Not for the ingenué.

Song of the Heart: A dry, woody fragrance with no trace of sweetness, yet definitely not heavy. A perfume of unusual distinction.

Leonard Holden Vaughan

Born March 8, 1880. Died September 11, 1943.

Leonard Holden Vaughan, President of Vaughan's Seed Store, died on September 11, 1943. He had been President since 1924, when he succeeded his father, John Charles Vaughan, who founded the business in 1876.

Born in Chicago in 1880, Mr. Vaughan was educated in the Chicago public schools, and in Armour Institute Academy, from which he graduated in 1899. After six months in the University of Chicago, he was enrolled in the department of horticulture of Cornell University, during the period of Prof. Liberty H. Bailey's active teaching. He was graduated in 1903 and at once entered the business.

After a training period he was placed in charge of the vegetable seed and greenhouse departments, and soon instituted and managed extensive seed and bulb growing operations, in which he took great interest, and which were constantly expanded during his life.

When he became President, he was thus equipped with thorough scientific training and twenty-one years' active participation in the business.

Following the example of his father, he devoted much time to furthering the interests of horticulture. He was President of the American Seed Trade Association in 1911, of the Society of American Florists in 1929, and of the Illinois State Florists' Association in 1941 and 1942. He was constantly active on committees of many organizations and just before his death, had been appointed a member of a committee of the seed trade to work with the O.P.A. on price ceilings. He was also interested in outside community activities, having been a member of the Lyons Township High School Board for nineteen years and president of that School Board for four years.

His interest in bulb growing, first concentrated on Gladioli, led him to undertake extensive experiments in commercial production of Tulip and Lily bulbs, which had never been successful in this country. When war interrupted imports from Holland and Japan, he had built up the largest tulip production in this country which thereupon became available for American use. Our Lily bulb production was also well under way in Louisiana and Oregon.

In 1904 Mr. Vaughan married Anita Wilkens, who survives with six sons and one daughter. His sons are John Charles Vaughan; Leonard H. Vaughan, Jr.; Gager Throop Vaughan; Lieut. Alan W. Vaughan, U. S. Army; Ensign Warren L. Vaughan of the U.S. Coast Guard; and Ensign Edward H. Vaughan, U. S. N. His daughter is Mrs. G. Raymond Donnersberger.

Mr. Vaughan was succeeded as President of the company by his eldest son, John Charles Vaughan, who, for several years has been manager of the New York branch. The new President was graduated

from the horticultural department of Cornell University, and passed several years in acquiring experience in seed and bulb production in various countries of Europe, and sections of this country. He assumed charge of the New York branch in 1930, since when he has acquired familiarity with all departments of the business.

Other officers are:

Carl Cropp, Vice President
Carl V. Cropp, Secretary
Leonard H. Vaughan, Jr.,
Assistant Secretary
Dr. Roger T. Vaughan,
Treasurer
Gager T. Vaughan, Ass't.
Treasurer

Leonard H. Vaughan, Jr., a graduate of Cornell, after working in various departments for five years, was made sales manager of the company in 1938, and continues to perform those duties in addition to assuming charge of the seed and bulb farms.

Gager T. Vaughan, also trained in the horticultural department of Cornell University, entered the business in 1937, as manager of the grass seed department, in which he continues, with added duties in the supervision of other departments.

Carl Cropp, Vice-President, who has been head of the flower seed department of the company for nearly sixty years, continues to be active in that position. He is known internationally as a specialist in annual and perennial flower seeds, and for several years he has been assisted by his son, Carl V. Cropp.

Under these directing heads the organization includes the following, who perform duties in which they were trained during the life either of J. C. Vaughan, the founder, or of Leonard H. Vaughan.

Edward H. Goldenstein, Manager of Bulb Department.
R. C. Becker, Manager of Nurseries.
Scott J. Redfern, Manager of Vegetable Seed Department.
E. A. Hesket, Credit Manager.
James H. Burdett, Advertising Manager.
John F. Tomczak, Head of Supply and Fertilizer Departments.
William Stallman, Head of Mail Order Division.
R. M. Carleton, Manager of Retail Store, Chicago.
Charles Keegan, Manager New York Branch.
M. Watson, Flower Seed Manager at New York.
M. Pettet, Manager Market Gardener Sales.
L. Thurlimann, Head Seed Analyst.
Frank E. McFarland, Manager of Greenhouses.

Vaughan's Seed Store, Inc., operates a retail store at 10 W. Randolph St., one of the largest retail seed stores in the United States; offices and warehouse which fill the seven story building at 601 W.
